What is a measurement? Accuracy, precision Errors, estimates, uncertainties Summary

Data reduction

Example: Sunrise Basic reduction steps Image restoration

Where to go from here?

・ロト・西ト・西ト・日・ つくぐ

What is a measurement?

"Classical" definition

The process of estimating or determining the magnitude of a physical quantity relative to a unit of measurement.

Representational theory

The correlation of numbers with entities that are not numbers.

Information theory

A set of observations that reduce uncertainty where the result is expressed as a quantity.

Measurement to Scientific Analysis

A. Feller

Metrology

What is a measurement?

Accuracy, precision Errors, estimates, uncertainties Summary

Data reduction

Example: Sunrise Basic reduction steps Image restoration

Where to go from here?

Accuracy vs. precision

Measurement to Scientific Analysis

A. Feller

◆□▶ ◆□▶ ◆目▶ ◆目▶ ●目 ● のへで

Accuracy vs. precision

Accurate but not precise

Precise but not accurate

Measurement to Scientific Analysis

A. Feller

Metrology

What is a measurement?

Accuracy, precision

Errors, estimates, uncertainties Summary

Data reduction

Example: Sunrise Basic reduction steps Image restoration

Where to go from here?

Accuracy

- Systematic errors
- Can be improved by calibration

Precision

- Random errors (noise)
- Can be improved by repeated measurements

・ロト・日本・山田・ 山田・ 山下・

Gaussian and Poisson error distributions

Measurement to Scientific Analysis

A. Feller

Metrology What is a measurement? Accuracy, precision Errors, estimates, uncertainties Summary Data reduction

Example: Sunrise Basic reduction steps Image restoration

Where to go from here?

Poisson distribution

- Photon noise!
- From "dice game" (binomial dist.) to radiative transition (Poisson dist.)

•
$$P_{
ho}(x;\mu)
ightarrow P_G(x;\mu,\sigma=\sqrt{\mu})$$
 for x large

Mean value as maximum likelyhood estimate (MLE)

• Model for measurements y_i , $i = 1 \dots N$:

$$y_i = \mu + n_i$$

with i.i.d. Gaussian noise n_i and free parameter μ .

Estimate:

$$\hat{\mu} = \bar{\mathbf{y}} = (1/N) \sum_{i=1}^{N} \mathbf{y}_i$$

Measurement to Scientific Analysis

A. Feller

Metrology

What is a measurement? Accuracy, precision Errors, estimates, uncertainties Summary

Data reduction

Example: Sunrise Basic reduction steps Image restoration

Where to go from here?

Mean value as maximum likelyhood estimate (MLE)

 Probability for realizing the observed set of measurements y₁,..., y_N:

$$P(y_1,\ldots,y_N) = \prod_i P_G(y_i - \mu; 0, \sigma) \propto \exp\left\{-\frac{1}{2\sigma^2}\sum_i (y_i - \mu)^2\right\}$$

 Maximum probability i.e. maximum likelihood for model to yield the measurements y_i:

$$\chi^2 = \sum_i (y_i - \hat{\mu})^2 \min. \Rightarrow \hat{\mu} = \bar{y}$$

1.2.1

"Least squares"

Measurement to Scientific Analysis

A. Feller

Metrology

What is a measurement? Accuracy, precision Errors, estimates, uncertainties Summary

Data reduction

Example: Sunrise Basic reduction steps Image restoration

General maximum likelihood estimates

• Model for measurements y_i , i = 1 ... N:

 $y_i = y(x_i; \mu_j) + n_i(\sigma_i)$

◆□▶ ◆□▶ ◆ 三 ▶ ◆ 三 ▶ ◆ □ ▶ ◆ □ ▶

- with Gaussian noise $n_i(\sigma_i)$ of standard deviations σ_i
- and with free parameters μ_j .

Measurement to Scientific Analysis

A. Feller

Metrology

What is a measurement? Accuracy, precision Errors, estimates, uncertainties Summary

Data reduction

Example: Sunrise Basic reduction steps Image restoration

General maximum likelihood estimates

 Probability for realizing the observed set of measurements y₁,..., y_N:

$$P(y_1, \dots, y_N) = \prod_i P_G(y_i - y(x_i); 0, \sigma_i)$$

$$\propto \exp\left\{-\frac{1}{2}\sum_i \left(\frac{y_i - y(x_i)}{\sigma_i}\right)^2\right\}$$

Maximum likelihood estimates for parameters μ_i:

$$\chi^{2} = \sum_{i} \left(\frac{y_{i} - y(x_{i}; \mu_{j})}{\sigma_{i}} \right)^{2} \min.$$

Measurement to Scientific Analysis

A. Feller

Metrology

What is a measurement? Accuracy, precision Errors, estimates, uncertainties Summary

Data reduction

Example: Sunrise Basic reduction steps Image restoration

Uncertainty of the mean value?

Estimate:

$$\hat{\mu} = \bar{\mathbf{y}} = (1/N) \sum_{i=1}^{N} \mathbf{y}_i$$

- Error propagation: $\sigma_{\mu} = \sigma / \sqrt{N}$
- 68.3% confidence interval: $\bar{y} \pm \sigma_{\mu}$

Uncertainty of a general model parameter?

•
$$\chi^2 = \sum_i \left(\frac{y_i - y(x_i; \mu_j)}{\sigma_i}\right)^2$$
 min. $\rightarrow \hat{\mu}_j$

- Evaluate variations of χ^2 as a function of the parameter
- Monte Carlo simulation

• . . .

Measurement to Scientific Analysis

A. Feller

Metrology

What is a measurement? Accuracy, precision Errors, estimates, uncertainties

Summary

Data reduction

Example: Sunrise Basic reduction steps Image restoration

Calibration

Goal: reduce systematic errors!

But calibrations are measurements of their own which come with their proper measurements errors \rightarrow error propagation!

2 types of calibration measurements

Otermine the correlation between the actual measurand and the representative measurand. Examples:

- wavelength calibration of spectra: wavelength ↔ pixels
- polarimetric calibration: polarization \longleftrightarrow intensity
- 2 Determine the influence quantities which
 - alter the physical quantity directly (e.g. movement of the spacecraft → Doppler shifts)
 - or which bias the output signal of the instrument (e.g. dark current, flatfield).

Measurement to Scientific Analysis

A. Feller

Metrology

What is a measurement? Accuracy, precision Errors, estimates, uncertainties Summary

Data reduction

Example: Sunrise Basic reduction steps Image restoration

Summary - Questions to be asked about a measurement

- Exact measurement task and quantity to be measured?
- Measurement principle?
- Absolute or relative measurement?
- Direct or indirect measurement?
- Required accuracy and precision? Sensitivty?
- What is the measuring environment? What are the influencing quantities? Which calibrations are needed?
