

Collisional properties of Saturnian ring particles

Von der Fakultät für Elektrotechnik, Informationstechnik, Physik
der Technischen Universität Carolo-Wilhelmina zu Braunschweig

zur Erlangung des Grades eines
Doktors der Naturwissenschaften (Dr. rer. nat.)

genehmigte Dissertation

von Daniel Heißelmann

aus Osnabrück

eingereicht am: 26. Januar 2015

Disputation am: 12. Mai 2015

1. Referent: Prof. Dr. Jürgen Blum

2. Referent: Prof. Dr. Joshua E. Colwell

Druckjahr: 2015

Contents

Abstract	9
Zusammenfassung	11
1 Introduction	13
2 Saturn's rings	15
2.1 Ring structure and dynamics	15
2.2 Ring particle composition and size	17
2.3 Temperatures in Saturn's rings	20
2.4 Collisions in the main rings	22
2.5 Collisions in the F ring	23
2.6 Theoretical and experimental ring research	25
2.6.1 <i>N</i> -body simulations, kinetic theories, stochastic approaches	25
2.6.2 Experimental studies of ice particle collisions	26
2.7 Models of contacts of spheres	29
2.8 Formation and age of Saturn's rings	30
2.9 Rings around other bodies than planets	32
2.9.1 Ring origin of Iapetus' equatorial ridge	32
2.9.2 Rings around centaur Chariklo	33
3 Binary collision experiments	37
3.1 Parabolic flight apparatus	37
3.2 Sample preparation	39
3.3 Binary collisions of centimeter-sized samples	40
3.4 Binary collisions of millimeter-sized samples	46
3.5 Subsumption of the binary collision experiments	49
4 Low-velocity collisions in particle ensembles	53
4.1 Drop-tower setup	53
4.2 Glass particle collisions	55
4.2.1 Image processing and particle tracking	55
4.2.2 Statistical analysis – Haff's law	57
4.2.3 Binary collisions of glass spheres	60
4.3 Ice particle collisions	62
4.3.1 Sample preparation	62
4.3.2 Collisions of plain ice spheres	63

4.3.3	Collisions of regolith-coated ice spheres	69
4.4	Experiment inferences	70
5	High-velocity impact experiments	73
5.1	Experimental approach	73
5.2	Sample preparation and handling	74
5.3	Experimental results	76
5.4	Interpretation	78
6	Specific surface energy of water ice particles	83
6.1	Accessibility via pull-off force	83
6.2	Experimental technique	84
6.3	Samples and handling	85
6.4	Results	87
6.5	Implications of the measured specific surface energy	90
7	Implications for Saturn's rings	93
7.1	Coefficients of restitution	93
7.2	Sticking threshold and aggregation processes	94
7.3	Chariklo's rings	99
8	Conclusion and outlook	101
	Bibliography	103
	Publications	117
	Acknowledgements	121
